|      |                  |             |     |     | <p>with heartbeat</p> <p>Product information "Pregnancy examination model with heartbeat simulation"</p> <p>This fantastic model allows practice of examination using the 4 Leopold gestures, external pelvic measurement, auscultation of the foetal heartbeats and breast care. The abdominal wall consists of a special synthetic material, which conveys an entirely natural feel and reproduces the skin and underlying tissue very naturally. By adding or releasing air, the simulated quantity of amniotic fluid can be adapted to the desired conditions. Any modification of foetal position is possible. The simulated heartbeats can be modified in both rate and intensity. By means of exchangeable inserts, it is possible to simulate a smaller or larger birth canal.</p> <p><b>Skills</b></p> <p>Life-size model which can be used for teaching and training of:<br/> Leopold 4-step manoeuvre<br/> External pelvic measurement<br/> Pinard stethoscope monitoring of the fetal heartbeat<br/> Breast care</p> <p><b>Features</b></p> <p>The abdominal wall is softer, more elastic and realistic for improved realism and feels very much like human skin, providing trainees with a remarkably realistic experience for assessment of the unborn baby<br/> For easier handling and control, inflation and adjustment of air volume inside the uterus enables an extremely lifelike sensation of both mother and baby<br/> Inside is a highly accurate skeletal structure which enables realistic practice of pulvimetry and abdominal measurement<br/> An internal synthesizer reproduces the realistic heartbeat sound of an unborn baby. Volume and speed are adjustable<br/> The heartbeat sound can also be heard through the loudspeaker</p> <p>Please attach all accessories related to the simulator device, complete sets</p> <p><b>important Note:</b><br/> Please ensure that all consumables related to each item are included, including the skin</p> |
